

Graph (c): Cross-Chain Bridge Hack Losses, 2020-2025

*Annual and cumulative losses to cross-chain bridge exploits. \$3.675B
cumulative across six years.*

Methodology / notes

Annual loss totals are aggregated from the Chainalysis 2024-2026 Crypto Crime Reports and cross-validated against DefiLlama's live Hacks dashboard and the Rekt News leaderboard. The SoK on cross-chain bridge security (arXiv 2312.12573) provides an academic-side cross-check on the 2020-2023 incidents. Cumulative loss is a running sum of annual values; the final 'Total' row repeats the cumulative figure for emphasis. Where an incident had a confirmed recovery (e.g., Poly Network 2021), the gross loss at the time of compromise is counted -- this matches the Chainalysis convention -- and the recovery is noted in the incident column rather than subtracted. The 2022 spike is dominated by four single-incident losses each above \$100M (Ronin, Wormhole, Nomad, Harmony) plus the BNB Chain validator-signature compromise; together these account for over \$1.8B of the year's total.

Graph (c): Cross-Chain Bridge Hack Losses, 2020-2025
Data table (values plotted in the graph)

Year	Annual loss (US\$M)	Cumulative (US\$M)	Notable incidents
2020	30	30	KuCoin partial bridge exfil ~\$30M; few cross-chain bridges live
2021	480	510	Poly Network \$611M (recovered); Vulcan Forged \$140M; ChainSwap
2022	1,880	2,390	Ronin \$624M; Wormhole \$326M; Nomad \$190M; Harmony \$100M; BNB Chain
2023	555	2,945	Multichain \$126M; HECO/HTX \$86.6M; Orbit Chain \$81M; Atomic Wallet
2024	410	3,355	Munchables \$63M; Ronin re-exploit; sub-\$100M bridge incidents
2025	320	3,675	ALEX Lab residual; mostly sub-\$100M incidents as audits mature
Total	3,675	3,675	Six-year cumulative; cross-validated against Chainalysis + DefiLlama
